

New Model Information

CUSTOM PARTS FOR 13 STELLA SW20000 Class Reels!

**FITTING MODEL : 13 STELLA SW20000~18000
08 STELLA SW20000~18000**

CUSTOM SPOOL FEATURE

- Radiator Unit
Built with its own radiator unit (similar to a car).
As the drag rotates it actually helps to cool down your washers and increase fighting power.
- Optimum Line Capacity
BM Model's (Big Mouth Model) MAX line capacity is #10PE = 350m / #8PE = 450m.
HP Model (High Power Model) is our expedition model and has a maximum line capacity of #8PE = 300m / #6PE = 400m.
RC Model (Rocket Cast) is our long cast model! Perfect for GT and Kingfish fishing.
RC has a line capacity of #8PE = 250m / #6PE = 300m.
- Precision Drag Setting
NOLIMITS drag system is composed of Ballard Corporation's top of the line carbon washers, titanium washers, pure teflon grease and vertical limiter system. Hands down the best big game components on the market.
- Oval Shaped Scandium Spool Ring
During casting, PE line often has trouble such as wrapping on the guides as well as backlashing.
We were able to correct this problem with our new design.
By using this scandium material we were able to make the spool ring not only lighter but incredibly strong.

CUSTOM HANDLE FEATURE

- EVA BM92 Knob
After 2 long seasons of testing, we have come up with the perfect solution to arm pump with these new knobs!
The narrow shape of these knobs, equipped with 4 small, but durable bearings will allow you to reel in both the regular or inverted position!
Using both sides of your forearm muscle while reeling will allow you to keep maximum pressure on a hard charging fish.
- EVA AG45 Knob
Due to the popularity of our smaller knobs as well as feedback from pro anglers, we decided to incorporate this knob to our larger handles.
Extremely light weight with improved gripping power, this knob will become your favorite without a doubt.
- 83mm Handle Arm
The handle arm was extended by 5mm from the conventional 78mm arm.
The long of pencil bait – it corresponds to a jerk or high weight jigging.
- 64 Titanium Parts
The very high intensity design which adopted the strongest titanium alloy 64Ti as a handle shaft or a handle rivet, and has improved the attached method of a handle shaft and an arm.
Since we started using 64 titanium material for our handle shafts, we have not had one complaint about it bending!!
※ We will be offering both left and right handed models at the same time.

Product name	Color	Drag Max(Prototype)	Line Capacity	Weight (Prototype)	Retail Price(JPY)
