

New Model Information

OceanTwin 2nd Version !

Since the release of our BG86 series, many customers have sent us inquiries on if we were going to be releasing a more lighter/compact version.

We are happy to announce that we will be offering such a model. Our 2nd version offers all the same quality and performance as our original GZ SET models! Only difference being, we have incorporated VANFOOK's lighter class "Blue Backs Shot" hooks.

■ What factors makes GZ Set's potential ?

Answer: Without a doubt, VANFOOK's "Blue Backs Shot" hooks .

These wide gape, straight point hooks allow for maximum penetration upon your hook set.

■ What type of hook is necessary while using a thinner assist line?

Answer: A long shanked hook allows for maximum leverage. Blue Backs Shot hooks offer the perfect length shank allowing for precise leverage and ultimate hook setting performance.

■ What type of hook works the best when the bites are short/soft?

Answer: Light weight and small diameter hooks are the best solution. Once again, VANFOOK's Blue Backs Shot hooks were built extremely light weight and durable, making them perfect for those difficult days.

These hooks are perfect for spooky Trevally, short biting YellowTail, Yellow FinTuna and Hiramasa!
incorporated VANFOOK's lighter class "Blue Backs Shot" hooks.
